

24/7

Telerespiratory help for nurses at the bedside.

rtNOW 
We empower respiratory care.

We provide equipment troubleshooting, respiratory assessment, education, and assistance with NIV and invasive ventilation. This provides reassurance for nurses at the bedside as we become a valued team member for your staff.

“We have been using rtNOW since November 1st and we’ve had nothing but **excellent service**, No connection issues, staff have said ‘it’s just like the RT is in the room in person and **part of the patient care team**’. Our Hospitalists say it’s a **100% improvement** from the (previous service) we used to use. We use for ED patients and Inpatients. We’ve used them for **guidance on patients** on high flow oxygen Airvo, CPAP, BiPAP and ventilated patients that we’ve had on our Med-Surg floor because we had nowhere to transfer them to. Our **staff feel so much more comfortable** having rtNOW if and when needed.”

Jamie Stolee
